SUMMARY

Full-stack engineer, nearly nine years building production web and mobile products in social commerce, real estate and healthcare, the last five remote with Australian teams. Works across React and React Native front ends, Node.js, GraphQL and PostgreSQL services, and takes features from schema through to what the user taps.

WORK EXPERIENCE

Full-Stack Engineer, Mobile · Ray White · Remote (Australia) **Contract · August 2024 - Present**

- Shipped 33 releases of Uplist, Ray White's pre-market property app, in React Native and TypeScript, as part of a small product team. Ray White is Australasia's largest real estate group.
- Designed the schema, queries and API integration behind Uplist's core workflows on Supabase Postgres.
- Took the pilot live ahead of public launch, with 93 agents across 10 offices who created 324 listings.
- Covered the app's core flows with React Native Testing Library so regressions surface before release.

Lead Developer · ShopShare.tv · Remote (Australia) **January 2021 - August 2024**

- Owned the entire stack of a social-commerce platform where creators record shoppable video and earn retail commission on what their audience buys: the React frontend, the Node.js and GraphQL APIs, PostgreSQL and Sequelize, and the AWS infrastructure. Worked directly with the founder and made the architecture calls across all of it.
- Built ShopRecorder, a Chrome extension that turns browser tabs into shoppable video (5,475 videos, 2,106 creators).
- Built and shipped Shopcast, a Shopify widget that gives in-session product guidance on merchant storefronts.
- Rebuilt billing from a single flat product into four paid tiers with team accounts. It reached 412 paying subscribers and \$9k MRR across US, UK and APAC, at 1.29% monthly churn.
- Integrated five affiliate networks (Rakuten, Impact, AWIN, Partnerize and Commission Factory) to attribute retail commissions back to creators, and built the admin reporting on creator activity.
- Built the Jest suite across the React frontend and Node.js GraphQL APIs. With no QA function, it kept releases safe.

Software Engineer, Full-Stack · Bourke Technologies · Sri Lanka **September 2017 - January 2021**

- Delivered four client products across healthcare, retail and e-commerce, built in Angular, .NET Web API and Microsoft SQL Server.
- Led a hospital communication platform for live intra-hospital video conferencing in React Native; built a Unity 3D indoor navigation system for Bunnings retail stores, a POS and product-management admin for Burgercafe in .NET MVC and WPF, and the Buckingham Tea e-commerce storefront with Stripe and Firebase.

SKILLS

Programming Languages: JavaScript, TypeScript, Python, C#, SQL

Frontend: React, React Native, Expo, Angular, HTML, CSS

Backend: Node.js, GraphQL, REST APIs, .NET Web API, Flask, Sequelize

Data: PostgreSQL, Supabase, Microsoft SQL Server, Firebase

Testing & CI: Jest, React Native Testing Library, Playwright, GitHub Actions

Cloud & Tools: AWS, Unity, Stripe, Shopify, Chrome Extensions

PROJECTS

Markerless Motion Capture - Turns ordinary video into Blender-ready 3D animation. A Keras autoencoder ensemble lifts 17-joint 2D pose to 3D at 77.6 mm MPJPE, served from Flask behind a Node.js, PostgreSQL and S3 job pipeline.

github.com/AnushkaMadushanka/mocap-hpe

auto-extension-reloader - Published npm webpack plugin that reloads a Chrome extension on each rebuild and surfaces build state in the toolbar. github.com/AnushkaMadushanka/auto-extension-reloader

Unity Games - Two browser games shipped in 2026: Hotfixed to Death, a boss fight where a fictional live-service dev team nerfs you with real, honest patch notes across eight rounds (\$5K GameName Game Jam, 343 entries), and Ape Dansala, a Sri Lankan Vesak street-service game with a global leaderboard on Unity Gaming Services.
