## SUMMARY

Full-stack engineer, nearly nine years shipping production web and mobile products across social commerce, real estate and healthcare — the last five remote with Australian teams. End-to-end ownership across React and React Native front ends, Node.js, GraphQL and PostgreSQL services, and the AWS or Supabase infrastructure underneath. Nearly four years as lead developer at ShopShare.tv; now building Uplist for Ray White.

## WORK EXPERIENCE

### Full-Stack Engineer, Mobile — Ray White — Remote (Australia) Contract · August 2024 – Present

- Shipped 33 releases of Uplist — the pre-market real-estate app of Ray White, Australasia's largest real estate group — in React Native and TypeScript within a small cross-functional product team.
- Delivered backend features on Supabase Postgres alongside the app, spanning schema design, queries and API integration for Uplist's core workflows.
- Took the pilot live with 93 agents across 10 offices and 324 listings created, ahead of public launch.
- Covered the app's core flows with React Native Testing Library, catching regressions ahead of release.

### Lead Developer — ShopShare.tv — Remote (Australia) January 2021 – August 2024

- Owned the entire stack of a social-commerce platform end to end — React frontend, Node.js and GraphQL APIs, PostgreSQL and Sequelize, and AWS infrastructure — working directly with the founder.
- Built and launched ShopRecorder, a Chrome extension that records browser tabs to produce shoppable video content, driving 5,475 videos published by 2,106 creators.
- Built and shipped Shopcast, a Shopify widget delivering tailored in-session product guidance to shoppers on merchant storefronts.
- Rebuilt billing from a single flat product into four paid tiers with team accounts, growing to 412 paying subscribers and \$9k MRR across US, UK and APAC at 1.29% monthly churn.
- Integrated five affiliate networks — Rakuten, Impact, AWIN, Partnerize and Commission Factory — attributing retail commissions back to creators, and built the admin reporting on creator activity.
- Built the Jest suite across the React frontend and the Node.js and GraphQL APIs — with no QA function, it was what caught regressions and kept frequent releases safe.

### Software Engineer, Full-Stack — Bourke Technologies — Sri Lanka September 2017 – January 2021

- Delivered four client products end to end across healthcare, retail and e-commerce using Angular, .NET Web API and Microsoft SQL Server.
- Led a hospital communication platform with live intra-hospital video conferencing in React Native, and built a Unity 3D indoor navigation system for retail stores and a Stripe and Firebase storefront.

## SKILLS

**Programming Languages:** JavaScript, TypeScript, Python, C#, SQL

**Frontend:** React, React Native, Angular, HTML, CSS

**Backend:** Node.js, GraphQL, REST APIs, .NET Web API, Flask, Sequelize

**Data:** PostgreSQL, Supabase, Microsoft SQL Server, Firebase

**Testing & CI:** Jest, React Native Testing Library, Playwright, GitHub Actions

**Cloud & Tools:** AWS, Unity, Stripe, Shopify, Chrome Extensions

## PROJECTS

**Markerless Motion Capture** — Turns ordinary video into Blender-ready 3D animation — a Keras autoencoder ensemble lifting 17-joint 2D pose to 3D at 77.6 mm MPJPE, served from Flask behind a Node.js, PostgreSQL and S3 job pipeline.

[github.com/AnushkaMadushanka/mocap-hpe](https://github.com/AnushkaMadushanka/mocap-hpe)

**auto-extension-reloader** — Published npm webpack plugin that reloads a Chrome extension on each rebuild and surfaces build state in the toolbar. [github.com/AnushkaMadushanka/auto-extension-reloader](https://github.com/AnushkaMadushanka/auto-extension-reloader)

## EDUCATION

**B.Eng. (Hons) Software Engineering — Informatics Institute of Technology (University of Westminster, UK), 2023** — completed part-time while working full-time.
